

PERSONALIZED WEALTH STRATEGY

Roy Forrest | October 2025

Executive Summary

A 12-month plan to (1) stabilize cash and lift credit, (2) launch a lean cohosting service that fits 0–2 hrs/week using a VA, (3) capture W-2 + 1099 tax savings with an audit-ready entity stack, and (4) automate Bitcoin accumulation with no preset cap. Arbitrage is optional later and gated by score, utilization, and runway.

 Year-One Value (base, cohosting only)	\$21,800 – \$53,200
--	----------------------------

 Year-One Value (with 1 arbitrage unit partial-year)	\$24,300 – \$60,700
--	----------------------------

If you add a BTC-linked income sleeve in retirement accounts, increase totals by \$800 – \$3,500 depending on product and size.

Current Snapshot

- Work type: W-2 + 1099
- Household income: \$300k+ (pre-tax)
- Fixed expenses: ≈ \$13,000/mo
- Liquid deployable: ≈ \$2,000
- Emergency-fund comfort: 2–3 months
- Non-mortgage debt: \$50k+; credit < 620
- Homeowner: No (renter)
- Retirement accounts: \$100k–\$250k
- Openness to real estate: Maybe → cohosting first
- Time available: 0–2 hrs/week
- Capital for next step: \$0–\$2,000
- Entity: Single-member LLC (good foundation)

30 Day Launch Checklist

Week 1 — Foundation

- Confirm SMLLC as disregarded entity; open business checking; connect QuickBooks/Zoho.
- Turn on Monarch/YNAB with 50/30/20 caps to expose monthly surplus.
- Start a Friday utilization sweep: pay personal cards 2–3 days before statement dates to keep <30%, aiming for <10% in 90 days.

Week 2 — Documentation & Policies

- Sign an Accountable Plan (phone/internet %, mileage, home-office method, monthly reimbursement cadence).
- Create an Expense Policy using de-minimis safe harbor (\$2,500/invoice).
- Photograph/measure home office; compute simplified vs actual and adopt the larger.
- Build a monthly receipt pack PDF + ACH reimbursement routine.

Week 3–4 — Credit & Systems

- Place and pay Tier-1 vendor orders (Uline / Quill / Shirtsy).
- Draft cohosting one-pager + contract; recruit a VA (10–15 hrs/mo; \$200–\$300/mo).
- Set up Hospitable (comms) + PriceLabs (pricing), ready to onboard first client.
- Open a River or Strike account; schedule BTC DCA \$200–\$300/mo.

Tax Optimization Playbook

1. Accountable Plan reimbursements

Your LLC reimburses you (tax-free) for legitimate business use of phone, internet, home office, and mileage—deductible to the business. Written policy + monthly packet + ACH from LLC to you.

Estimated Year-One value: \$2,000 – \$4,000

2. Home office (renter qualifies; choose higher method)

Simplified: \$5/sq-ft up to \$1,500/yr. Actual: business % of rent, utilities, renter's insurance, repairs. Example: 100 sq-ft office in 1,000 sq-ft home = 10% business use; with rent $\approx$ \$27,600/yr, Actual $\approx$ \$2,760 often beats Simplified.

Estimated value: \$1,500 – \$2,800

3. Mileage & local travel

Track with an app and reimburse monthly at the IRS rate.

Estimated value: \$600 – \$1,200

4. QBI (199A) on cohosting/consulting profit

Up to a 20% deduction on qualified business income if within thresholds. Price services to avoid chronic losses; keep clean books.

Estimated value: \$4,000 – \$12,000

5. Solo 401(k) (or SEP-IRA) on 1099 profit

Employer contributions shelter profit and lower current taxes.

Estimated value: \$8,000 – \$20,000

6. De-minimis + 12-month rule

Expense items $\leq$ \$2,500/invoice immediately; deduct eligible prepaids that do not extend beyond next tax year.

Estimated value: \$500 – \$1,000

7. Health accounts (if eligible)

HSA / FSA / DCFSA can reduce taxable income for predictable costs.

Estimated value: \$1,000 – \$3,000

Note: As a renter, the Augusta Rule is generally a homeowner strategy; use cowork/meeting space instead —deductible but not “tax-free rent.”

Airbnb Path: Cohosting → Decision Gate → (Maybe) Arbitrage

Cohosting (fits \$0–\$2k and 0–2 hrs/week)

- Offer: listing optimization, dynamic pricing, guest comms, cleaner coordination, monthly KPI report.
- VA: 10–15 hrs/mo handles comms and reporting (\$200–\$300/mo).
- Fee: 20% of gross (15–25% by scope).
- Pipeline: 25 owners → 5 calls → 1–2 clients.
- Net after tools/VA: \$300–\$600/mo per client.

Decision Gate (Month 4–6)

- Personal utilization <30% (aim <10%) and score rising.
- 6 months of unit expenses covered via cash + business lines.
- At least 1 cohosting client profitable 60+ days.
- Household buy-in; avoid personal guarantees where possible.

Arbitrage (if gate passed)

- Startup: \$5k–\$7k per 1-bed (furnishings + deposits).
- Funding: business credit + vendor accounts.
- Net: \$700–\$1,000/mo once stabilized.
- Tax: 100% bonus depreciation on furnishings/gear in Year 1.
- Risk control: keep 6 months of unit expenses.

Business Credit Ladder (no co-mingling)

- **Tier 1 (Month 1–2):** Uline, Quill, Shirtsy (net-30; ensure reporting).
- **Tier 2 (Month 3–4):** Amazon Business, Dell/Staples (revolving).
- **Tier 3 (Month 5–7):** Amex Blue Biz, Chase Ink, Divvy (0%/low-APR promos).

Target: \$15k–\$35k usable lines by Month 9–12.

Investment Strategy and Portfolio Context

Core: Bitcoin accumulation

- Start now: \$200–\$300/mo DCA via River or Strike.
- Scale: step to \$500–\$1,000/mo as debt falls and cohosting cash arrives; no preset cap.
- Custody: exchange (short term) → hardware wallet → 2-of-3 multisig when > 1 BTC.
- Altcoins: migrate 90–95% to BTC over 6–12 months; harvest losses first.

Optional BTC-linked income sleeve (retirement only)

- **STRF** — 10% cumulative preferred (senior among preferreds).
- **STRC** — Variable-rate cumulative preferred (monthly cadence).
- **MSTY / IMST** — Option-income ETFs on MSTR; variable payouts, capped upside.
- Sizing: 5–10% of retirement balance; DCA over 3 months; review quarterly.

Year-One Value Breakdown (Oct 2025 → Sep 2026)

A) Tax & Documentation Strategies

Item	Estimated Value
Accountable Plan reimbursements	\$2,000 – \$4,000
Home office (chosen method)	\$1,500 – \$2,800
Mileage & admin travel	\$600 – \$1,200
QBI (199A) on cohosting/consulting profit	\$4,000 – \$12,000
Solo-401(k)/SEP employer contribution	\$8,000 – \$20,000
De-minimis + 12-month rule	\$500 – \$1,000
HSA/FSA (if eligible)	\$1,000 – \$3,000
Tax subtotal	\$17,600 – \$44,000

B) Business Cash Flow

Item	Estimated Value
Cohosting (1 client, 8–12 months; VA-assisted)	\$3,600 – \$7,200
Arbitrage (1 unit partial-year, only if gate passed)	\$3,500 – \$7,500
Business subtotal	\$3,600 – \$14,700

C) Investment Growth/Income

Item	Estimated Value
Bitcoin gains (on \$2.4k–\$12k invested during year)	\$600 – \$2,000
Optional sleeve: STRF 10% cumulative	\$1,000 – \$2,500
Optional sleeve: STRC variable cumulative	\$800 – \$2,500
Optional sleeve: MSTY/IMST option income	\$1,200 – \$3,500

 **Base (cohosting only; no arbitrage, no sleeve)**

\$21,800 – \$53,200

With arbitrage (1 unit partial-year)

\$24,300 – \$60,700

Add income sleeve (optional): + \$800 – \$3,500

12-Month Timeline

- **Month 1:** Structure live; policies signed; Friday sweep; Tier-1 vendors; BTC DCA on.
- **Month 2:** VA hired; owner outreach cadence; apply Tier-2 when tradelines report.
- **Month 3–4:** First cohosting client live; monthly KPI report; utilization trending <30%.
- **Month 5–6:** Decision gate on arbitrage. If yes, sign 1 unit and bonus-depreciate furnishings.
- **Month 7–9:** Add second cohost client if time/capital prefer; consider small income sleeve in retirement.
- **Month 10–12:** Year-end projection; capture prepaids; finalize reimbursement packets; set Year-2 targets.

Immediate 30-Day Checklist

- Open/confirm LLC bank; connect QuickBooks; start monthly reimbursement packet.
- Measure/photo home office; adopt higher of simplified vs actual.
- BTC DCA live (River/Strike); custody plan documented.
- Owner list (25) built; VA onboarded; outreach templates ready.
- Tier-1 vendor orders placed and paid; calendar statement dates for utilization sweep.
- Draft decision-gate metrics (score/utilization/runway/client KPIs).

Summary

This plan keeps risk low and time demands tiny while you (1) reclaim taxes through a clean, documented business layer, (2) prove revenue with cohosting before considering arbitrage, and (3) build asymmetric upside by stacking Bitcoin with disciplined custody. If you want extra yield inside retirement accounts, add a small BTC-linked income sleeve—otherwise, focus on the cohosting flywheel, score rehab, and BTC stacking.
